

Declaration of consent for admission to the ÖNWT (as of 06.03.2023)

The ÖNWT (Austrian Nutrient Database, www.oenwt.at) is an electronic data collection and represents an extension of the BLS (Bundeslebensmittelschlüssel BLS, Nutrient Database Germany, www.blsdb.de). The ÖNWT contains information on foods and dishes (nutritional values, allergens, portion sizes). The ÖNWT is mainly utilised by users of the software *nut.s nutritional software*, to create product labels or perform nutritional advice tasks. The data provided by the ÖNWT is a service to users, so that the data available via specifications or labels do not have to be entered manually. ÖNWT and BLS provide 131 ingredients and nutrients for each article without missing values. The data made available by food manufacturers (e.g. Big 7 of packaging, homepage, specification) are supplemented in a scientifically understandable manner by the missing nutritional information. The collection of data is quality-assured by nutritional professionals.

- Admission to the ÖNWT is free of charge.
- Admission to the ÖNWT is not related to any obligations or responsibilities.
- The final check of the data in the ÖNWT for usability or correctness lies with the user of the ÖNWT.
- The ÖNWT is passed on as an electronic data collection.
- DATO ensures that the data is up-to-date by means of regular updates.
- With the data acquisition, and additional information is sent to the manufacturer/producer.

Currently, more than 9.000 products from about 700 companies are listed in the ÖNWT.
